

Sprint 2 Requirements Artifacts

Overview:

When user wants to see the map to find new cards and battle gyms, they want to be able to open the map from the home page.

Functional Requirements:

User Story: As a user I want to be able to open the map and join battles.

Create map, open map, and join battles: Colin and Jacob

FR1: Create the map

FR2: Allow users to click the map button and see the map that we created

FR3: Allow users to join battles from the map screen

FR4: When in a battle the user will have the deck they saved

Overview:

When a user saves information to their account, updates their deck, or wins a gym, they want that information saved and to be able to access that information accurately again on return.

Functional Requirements: Hannah

User Story: As a user, I want to know that the data I'm seeing is relevant to my account, that no one else is going to be able to edit my data.

Connection front end and backend: Hannah

FR2: Create new models, routes and controllers for gyms

FR3: update user models to be accurate

FR4: Update frontend to integrate and connect to database

FR5: Set up webhooks and push project to server

FR6: Write and use tests to see if this is correct

Overview:

If a user wants to delete their account, the database will be able to pull their information from the server and make it where that user no longer exists, and their progress is expunged so that no one else can access it

Functional Requirements:

Sprint 2 Requirements Artifacts

User Story: As a user, I want to know that my data can be safely deleted without anyone being able to access my progress or wanting to start over.

Adding delete user functionality: Dustin

FR1: System should be able to delete a user account with a click of a button and understand the risks of doing so.

FR2: Backend should be able to locate and verify the user based on credentials created by the user to confirm deletion.

FR3: Ensure deletion of their account; the server will remove their username, password, and progress from the system and update the database to an invalid credential state.

FR4: Delete mechanism should return invalid if the username does not exist in database

Overview:

As a user plays the game and collects more cards, the game's enemies need to become progressively more difficult in order to continually engage users and keep the game relevant and playable.

Functional Requirements:

User Story: As a user, I want the enemies I face to become progressively more difficult, and be rewarded for my effort.

Create leveling system / enemy AI: Riley

FR1: Create algorithm for enemy AI

FR2: Add hidden 'level' attribute to user accounts, that influences the difficulty of opponents

FR3: Ensure users can understand dynamics of game in-round with updated special effects and card tooltips

FR4: Hook enemy deck generation to battle backend to manage at runtime

FR5: Implement realistic 'deck' characteristics on both enemy and user side (shuffle, draw)

Overview:

As a user logs in, changes their decks, and wins any gyms their info is stored and retrieved quickly to prevent the user from experiencing issues with their data.

Sprint 2 Requirements Artifacts

Functional Requirements:

User Story: As a user I want to be able to login and change my decks as quickly as i can and experience no slowdowns due to slow data retrieval.

Create fast api's and test for speed and bandwidth: Ryland

FR1: Create Api routes that can handle connections fast

FR2: Create testing suite to ensure connections are handled correctly

FR3: Create the rest of CRUD routes and queries with the same performance
