

Final Sprint Requirements

Overview: Battle Screen Testing (Riley and Hannah)

Ensure that when the user is battling against an opponent, the game logic works as intended and the results of the match are accurate

Overview: Login Screen Testing (Dustin)

Ensure the user can login to the game if they have an account and create an account if they don't have one already. When returning, their progress is preserved or if they're new, a short tutorial should pop up. If any invalid cases occur, a pop up should appear indicating what is happening.

Overview: Integration Testing (Ryland)

Make sure any changes or updates the user makes is reflected correctly, any interaction that makes a change or request to update info is done.

Overview: Home Screen Testing (Colin)

Confirm the user can access everything they need to from the home screen. This includes being able to log out, see their character, enter their inventory, click on the map, etc..

Overview: Inventory Testing (Hannah)

Ensure all function are working in regards to inventory page and updates that are made to inventory throughout the game.

Overview: Deployment testing (Riley)

Ensure all functions work on server and not just locally. Includes storing accounts, properly pulling from database, won cards being added to inventory, and reloading pages not hurting accounts.

Overview: Personal login issues and general testing. (Jacob)

Focus on identifying and testing the current login issues preventing access to the game. Once login is functioning, perform general testing to ensure navigation and core features

Final Sprint Requirements

work correctly, including accessing the home screen, map, battles, and inventory.
Document any errors or unexpected behavior for future fixes
