

Sprint 3 Requirements

Overview:

When a user wants to earn new cards, they can open up the map and see sprites appearing on the map which they can click on and battle to earn the card.

Functional Requirements:

User Story: As a user I want to be able to encounter sprites and earn them so I can improve my deck.

Click on sprites to open a battle page against the sprite they clicked on: Colin & Jacob

FR1: Sprites will randomly pop up on the map page.

FR2: When user clicks on a sprite it will open a battle page where they try to beat

FR3: If user beats the dodo, then a random card from its inventory will go to the user's inventory.

FR4: After the battle the map screen will appear again

Overview:

When a user wants to know what each card represents and decides what to draw or put into their inventory, they need to understand that each element has an advantage over another, and they can open a chart to figure out what element takes over in each turn.

Functional Requirements:

User Story: As a user, I want to be able to understand what each element symbol means so I can understand the effects and chance of winning a round.

Display elements' strengths and weaknesses: Dustin

FR1: When the user and the opponent draw their cards, whoever has the stronger advantage will win the round.

FR2: At any time during the battle, the user may open the advantage chart to view what element beats what.

FR3: There are some exceptions if an effect takes place, and a disadvantaged element may have a chance of winning the round.

FR4: This feature will also be available on the inventory deck, and the dojo map pages before the next battle.

Overview:

Sprint 3 Requirements

When a user first creates an account, they should be presented with a tutorial where they are able to learn the basics of inventory management, deck building, and gameplay.

Functional Requirements:

User Story: As a user, I want to understand the flow and rules of the game, how to progress my deck, and how to interact with the map.

Tutorial: Riley

FR1: When a user first logs on, they will be directed to a 'tutorial' page

FR2: The tutorial page shall explain the map system mechanics, including Dojos and random encounters, before directing the user into a battle.

FR3: This mock battle will teach the user how to play cards, which cards beat others, and the win conditions for a battle.

FR4: After the user wins this battle, they shall be presented with their new card and directed to the inventory screen, where they will be shown how to add it to their deck.

Overview:

A user wants a place to be able to construct a primary deck from their inventory of cards. This allows for there to be more strategy in deck building and inventory gathering.

Functional Requirements:

User Story: As a user, I want to be able to change the cards that I'm playing with depending on the situation since I can't use my entire inventory

Deck builder: Hannah

FR1: Create a page on the front end for them to do this before a battle

FR2: Create the ability for them to do this in a drag and drop type function

FR3: Make the design of the page match the theme of the project

FR4: When exiting the page, it should update the backend so that the next time they log in this change is saved

Sprint 3 Requirements

Overview:

When a user is updating their profile, changing cards, or fighting a gym they do not want run into errors about their data not updated correctly, or the deck in a gym not being updated correctly. If there are errors there is decent logging to track the error and implement a fix

Functional Requirements:

User Story: As a user I want to update my account and fight gym battles without running into errors and losing cards or data because of it.

Test and logging: Ryland

FR1: Create tests for requests that cover all cases.

FR2: Add logging at each step to keep track of any errors that can occur.

FR3: Create documentation on the expected request header and body should be and same for the format of received data.

When a user opens the map, each elemental region (Fire, Water, Earth, Air, Ice) should display a **unique dojo image** instead of a placeholder. These dojo images visually identify each elemental zone, improving immersion and helping players recognize where they can challenge that element's dojo.

Functional Requirements:

User Story: As a user, I want each elemental dojo on the map to have its own distinct image so I can easily recognize which element it represents.

Element Dojo Images: Jacob

FR1: Replace all existing placeholder dojo images (fire_placeholder.png, water_placeholder.png, earth_placeholder.png, air_placeholder.png, ice_placeholder.png) with custom designed dojo image assets that visually represent each element.

FR2: Each dojo image must be consistent in art style, color palette, and resolution (e.g., 256 × 256 px transparent PNGs) to match the map's visual theme.

FR3: The dojo images will be clickable on the map, maintaining the same functionality as the placeholders — clicking a dojo opens its respective battle or dojo information screen.

Sprint 3 Requirements

FR4: The map screen shall update dynamically to load these images from the /frontend/public/ directory so that future replacements or redesigns only require swapping the image files, not changing the code.
